The Premier Application for Your Pollinator Protection Plan

Kelly Registration Systems has developed a program, currently being used by the Clemson University Department of Plant Industry to track some 25,000 to 30,000 honeybee colonies in South Carolina.

This Unique Tracking Application:

- **Allows beekeepers, farmers, and pesticide applicators to match locations of hives and areas that will receive pesticide applications**

- **Lets applicators know which areas to avoid**

- **Alerts beekeepers to temporarily move or close hives to reduce potential exposure**

Program Features

- **Track** beekeepers, hive registrations, organic farms, vineyards, sensitive/protected areas, and license fee payments (if required).

- **Beekeepers**—mark hives as active, update GPS locations, submit online applications and renewals (if required). Ownership and location is kept confidential except for state and applicators.

- **Applicators**—location mapping, multiple layers of data, draw 2-mile buffer zones with pins showing hives within the area, and polygons showing overlapping sensitive areas.

- **Email and text notifications** to beekeepers and applicators.

- Farmers/applicators can **save field coordinates** for future re-mapping.

- Works with **voluntary or required** programs.
