

Pre-Approval Requirements for Importation of Captive Cervids into Utah

Checklist

- Completed [Utah Domesticated Elk Import Application](#)
 - Signed by state/provincial animal health official
 - Approved by Utah State Veterinarian's office

- CWD Requirements
 - Participation in a National CWD Herd Certification Program for at least 60 months
 - Certified CWD free status from the state/province of origin
 - More than 20 miles from a CWD case
 - Letter that verifies the herd status for CWD testing from the administering agency
 - Not from a CWD-affected, trace-back, or trace-forward herd

- Genetic Purity
 - Negative test for red deer genetic factor OR
 - Registration with the North American Elk Breeders Association OR
 - Herd purity certification papers

- P. tenuis (Meningeal worm)
 - No captive cervids from east of the 100th meridian
 - No infected or exposed animals in the herd

- Herd Records
 - Herd size
 - Date of last audit/inspection
 - Number of elk that have died/were slaughtered in last 5 years
 - Number of elk tested for CWD in last 5 years

- Other
 - TB Accredited Herd number or Date of last TB test
 - Brucellosis Certified Herd number
 - RFID tag and ranch tag with a unique number

Pre-Approval Requirements for Importation of Captive Cervids into Utah

Import Application

The consignor must first complete the [Utah Domesticated Elk Import Application](#) and forward to the governing agency in the consignor's state or province. The governing agency is responsible for validation of all information and compiling the necessary herd records and then returning the application to the Utah Department of Agriculture and Food Division of Animal Industry for consideration. The consignor should move forward with the required testing only after the herd has been approved for import. The import application can be scanned and e-mailed to elk@utah.gov or faxed to (385) 465-6026.

CWD Requirements

All domesticated elk must originate from state or province which has implemented a verified CWD surveillance program. Domesticated elk will only be allowed to enter Utah from herds that have been actively participating in a verified National CWD Herd Certification Program for at least sixty (60) months and have a certified CWD free status issued by the animal health official from the state or province of origin.

Domesticated elk that originate or have ever been in the CWD endemic portions of Alberta, Saskatchewan, Colorado, Nebraska, South Dakota or Wyoming are **NOT** permitted to enter Utah. No herd within 20 miles of a positive CWD case may export cervids to Utah. UDAF will use the official Canadian CWD map for herds from Canada.

A letter must be provided from the administering agency which verifies the herd status for CWD testing, including:

- Herd Identification
- Current herd size and inventory
- CWD enrollment date
- Number of deaths since enrollment
- Number of elk slaughtered or hunted since enrollment
- Number of laboratory reports of CWD testing including prior enrollment
- Source herds from which elk have been imported for the previous 5 years (Elk Movement Report), and dates of additions to the herd

No domesticated elk originating from a CWD affected herd, trace-back or trace-forward herd may enter Utah.

Genetic Purity

All domesticated elk entering Utah must have a negative test for red deer genetic factor (RDGF). Animals will be exempt from testing if they are registered with the North American Elk Breeders Association (NAEBA) or are originating from a state that has a recognized RDGF prevention program.

- Test charts from an approved laboratory that have either a blood genetic purity test or DNA genetic purity test
- Registration papers from NAEBA
- Herd purity certification papers issued by another state agency or province.

Genetic purity certification of donors is required for all semen, gametes, eggs or embryos imported into Utah.

Other Requirements for Pre-Approval

Reindeer may only be imported to facilities with an existing [Certificate of Registration](#) from the Division of Wildlife Resources.

No domesticated elk which have ever been east of the 100th meridian may enter Utah. No cervids that have been infected with or exposed to *P. tenuis* (meningeal worm), or originated on a premises where *P. tenuis* has been identified may enter Utah.

All captive cervids must be officially identified with a radiofrequency ID (RFID) tag and a ranch or dangle tag with a unique number. The official and unofficial IDs do not need to be listed on the initial application, but will be required for final approval.

All cervidae imports must comply with the provisions of the [Brucellosis in Cervidae: Uniform Methods and Rules](#) and [Bovine Tuberculosis Eradication: Uniform Methods and Rules](#). Additional information may be found in the UDAF Cervid Import Testing Requirements and the [Protocol For the Importation of Farmed Cervids From Canada](#).

Do not move forward with the required testing until the herd has been approved for import.
