

BRUCELLA CANIS TESTING

TESTING

New Dog Entry Testing

- Any dog entering your facility
- Test immediately upon arrival
- Strictly quarantine away from all other dogs
- Retest after 8-12 weeks of strict isolation
- Only allow to interact with your other dogs after both tests return negative

Whole Kennel

- Every 12 months:
 - Test every dog over 6 weeks old
 - Best when females are close to or in heat
- Delay testing on dogs who have received an antibiotic within the last 3 months

Breeding Animals

- When using artificial insemination:
 - Test males within 3 weeks prior to breeding
- If using live cover:
 - Test males and female within 3 weeks prior to breeding

TEST INTERPRETATION

Positive Result

- Both screening and confirmatory test positive
- See *B. canis* Positive Dog Guidance

Suspicious Result

- Screening test positive
- Confirmatory test negative
- Retest every 4 weeks

TESTING IS COMPLEX

Please contact the Utah State Veterinarian's Office for planning assistance.

TEST TYPES

Screening Tests

- IFA
- AGID(cwa)
